SLA Performance & Systemic Bottlenecks

Executive Presentation & Strategic Recommendations

Danish Khan

Data Analyst

The Business Objective

Primary Question:

Why is the organization failing to meet its 48-hour Service Level Agreements, and how is this impacting customer satisfaction?

Goal:

Identify operational bottlenecks and process failures across channels to design targeted routing adjustments and staffing strategies.

Scope:

Analysis of over 200,000 historical customer support tickets.

Overall SLA Performance :The 80% Crisis

Key Finding: 80% of all closed tickets fail to meet the 48-hour SLA deadline.

40,029 Total Closed Tickets

32,055 Breached SLA (>48h)

(80.08% - TheOperationalDeficit)

7,974 Met SLA (<48h)

(19.92% - TheSuccessfulCore)

SLA_Breach_Ratio

Channel Bottlenecks: Systemic Floor Delays

Key Finding: The failure is not isolated. Every single department is missing the 48-hour target by exactly the same margin.

Phone & Email (~120.7 hours):
Highest volume channels are trapped in identical backlog loops.

Chat & Social (~119.5 hours):
Expected "rapid response" channels are failing to provide expedited resolution.

Priority Routing : Inverted Resolution Times

Key Finding: The internal IT routing system is actively failing its purpose.

Urgent (121.1 hours):

Automated systems tag tickets as "Urgent", but they take the longest time to resolve.

Low (119.9 hours):

Lowest priority tickets are being resolved faster than emergencies.

Insight: Agents are cherry-picking easier, low-priority tickets from the queue instead of adhering to forced priority routing.

High-Value Revenue Risk

Key Finding: Corporate clients are waiting identically long as standard users, risking contract renewals.

Corporate Segment:
Our highest revenue drivers wait over 117 hours across all channels, receiving no dedicated expedited service.

Small Business & Individual:
Wait times are evenly distributed, proving there is no VIP routing protocol in place.

Strategic Recommendations

1. Audit IT Routing & Implement Force-Routing

Investigate the CRM logic immediately. Remove the UI capability for floor agents to manually cherry-pick easier tickets. Implement a strict "next-in-queue" automated push to ensure Urgent tickets are handled first.

2. Launch a Dedicated VIP Queue

Protect high-revenue contracts by pulling the top 10% of senior agents off the general floor. Dedicate this rapid-response unit strictly to the 'Corporate' customer segment.

3. Immediate Headcount & Budget Review

Process fixes cannot solve a fundamental lack of resources. Because all channels are operating at 2.5x the allowed SLA time, an immediate budget request for increased general headcount is required.
